- Camera resolution: 13MP (4224 x 3136)
- Full frame rate recording: 30 frames per second for all resolutions including 1080p, 720p, and 480p
- 3-axis accelerometer

STARWITNESS™
FROM SIGNALSCAPE

INTRODUCING STARWITNESS FIELD INTERVIEWER HD BY SIGNALSCAPE, INC.

Lighter than a mini smart tablet. Smaller than a stack of index cards. Yet with this intense portability and ease comes unprecedented power. This complete, portable digital interview solution lets you start recording in seconds, excels in all kinds of environments and delivers end-to-end evidence security and authentication.

[ACTUAL POWER]

- Internal micro-phones tuned for recording voices

- External audio port for any standard 3.5 mm microphone or headphones

- High-speed USB-C 3.0 connection for charging and data download

- Case management software package for playback, management, authoring DVDs, and export of additional file formats

Four integrated cameras and dual-camera recording

One-touch "start recording" button

Integrated touch-screen

Three video resolution options: NTSC, HD, and Full HD

- Records MP4 for cross-platform and cross-operating system compatibility

- LED for battery life and record status check

- Internal solid-state memory

- Dual-camera recording shows a close view of the subject and a wide-angle view of all participants

SIMPLICITY

Start recording in seconds. Just flip the Field Interviewer HD open, zoom in on your subject and press the one-touch record button to begin. With dual-camera capability, the Field Interviewer HD simultaneously records a close view of the subject and a wide-angle view of all participants in the interview. Easily check battery life, record time and status. Review interviews with simple controls. Listen to audio through the integrated loudspeaker or headphones.

FLEXIBILITY

Record high-quality interviews in all conditions. From a small, noisy room with poor lighting to a large conference room filled with interview subjects, you will always produce a first-rate recording. Record different angles, focus on close up or group dynamics, get accurate recordings of speech (even faint speech or whispers). Or use external mics to counter any near-far issues and omnidirectional table microphones for larger groups.

Recordings are immediately available for download from the device post interview. Download times can be as short as six seconds for an hour-long recording. For playback, review recorded interviews with comprehensive playback controls: play, pause, rewind, fast-forward, and precision scrubbing.

EVIDENCE COMPATIBILITY AND SECURITY

Evidence is protected, preserved, stored, and accurately tracked within the software. Your video and audio files are playable in Windows Media Player, QuickTime, and other standard video players. They're also compatible with file storage systems such as Microsoft SharePoint and digital evidence management systems. You'll get date, time and watermarked authentication while recording (permanently burned onto the saved files, too).

FIELD INTERVIEWER HD KIT

Rugged, portable, weatherproof case with multiple charging options and external microphones

TECHNICAL SPECIFICATIONS

- Field Interviewer HD
- USB-C to USB-C high-speed 3.0 data and charging cord
